### RATING:

Initiated Coverage 29/02/2024

We recommend Buying FINS as the stock offers compelling upside potential supported by improving fundamentals and attractive risk-adjusted returns. This assessment is grounded in our analysis of four critical factors influencing common stock performance: (1) relative valuation, (2) earnings strength, (3) financial stability, and (4) price movement.

**First Insurance Company** ("FINS" or the "Company") is a Jordanian insurance company that offers a comprehensive range of insurance products and services, including motor, property, health, marine, travel, and liability insurance.

**Credit Rating Review:** AM Best has placed FINS' Financial Strength Rating of B++ (Good) and its Long-Term Issuer Credit Rating of "BBB+" under review with developing implications. This rating action follows the announcement made on August 11, 2024, stating that the Company's parent, Solidarity Group Holding B.S.C., has agreed to acquire the operations of Bahrain National Insurance Company B.S.C. and Bahrain National Life Assurance Company B.S.C. for a total consideration of BHD 75 million. The completion of this transaction remains contingent on further due diligence and obtaining all necessary corporate and regulatory approvals.

### Recommendation Summary

UFICO upgrades its recommendation on FINS to **BUY**, based on a systematic analysis of four key indicators that collectively point to sustained strength. The company's strong premium growth, solid net income performance, and healthy return on equity in Q1 2025 signal positive momentum both operationally and financially. While investors should continue to monitor upcoming results for confirmation of this trend, current valuations and fundamentals suggest a favorable entry point for long-term exposure.

#### Relative Valuation

FINS's pricing appears to be potentially undervalued relative to its peers and the sector, based on both its P/E and P/BV ratios. Meanwhile, the Company did not distribute any dividends for 2024 which may affect income seeking investors.

#### Earnings Strength

FINS delivered strong Q1 2025 results, with premiums written rising 20.7% year-over-year and net income growing by 15.4%, reflecting solid underwriting performance and disciplined expense management.

#### Financial Stability

In Q1 2025, FINS demonstrated solid financial stability, maintaining a strong solvency ratio well above regulatory requirements. The Company's conservative risk management approach helped preserve capital strength while supporting consistent earnings.

#### Price Movement

FINS presents a moderately bullish outlook with potential for growth. The stock's ability to maintain its position above the 200-day MA signals positive long-term momentum.

### Major Risks & Rewards

- **Regulatory Oversight:** FINS operates under regulatory oversight by the Central Bank of Jordan (CBJ), enhancing investor confidence in the stability and integrity of its operations within the financial system.
- **High Barrier to Entry:** Establishing an insurance company in Jordan entails significant barriers to entry, including the necessity of a substantial capital investment of JD 25 million, which could pose a challenge for potential newcomers.
- **Diversification:** Including FINS stock in a diversified portfolio can mitigate risk and potentially enhance overall performance.
- **Underwriting Risk:** FINS face the risk of underestimating claims or mispricing policies, leading to underwriting losses.
- **Investment Risk:** Insurers invest premiums to generate returns, exposing them to market risks such as volatility, interest rate fluctuations, and credit risk.
- **Regulatory Risk:** Changes in regulations can impact insurers' operations, capital requirements, and profitability.
- **Catastrophic Risk:** Insurers face the risk of large-scale losses from natural disasters, pandemics, or other catastrophic events.
- **Competitive Risk:** Intense competition within the insurance industry, compounded by the presence of 19 companies, can exert pressure on premiums and margins, thereby impacting profitability.
- **Liquidity Risk:** Due to lower trading volumes and limited liquidity, investors may encounter challenges in buying or selling FINS shares without impacting the stock's price and may face higher transaction costs as a result.

### Past Performance

	2020	2021	2022	2023	2024	1Q24	1Q25
Dividend Yield	5.65%	5.80%	5.88%	5.33%	-	-	-
Dividend/Share (JD)	0.035	0.040	0.040	0.040	-	-	-
Earnings/Share (JD)	NA	NA	0.014	0.104	0.111	0.020	0.023
Return on Equity	NA	NA	5.30%	8.86%	8.81%	9.17%	6.89%

### Relative Valuation: NEUTRAL

Last Price	Market Cap	EPS	P/E	BV/Share	P/BV
4/6/2025	4/6/2025	(TTM)	(Forward)	(MRQ)	(MRQ)
JD 0.83	JD 23.24 M	JD 0.023	9.01x	JD 1.36	0.61x

- **P/E vs Industry** suggests that FINS is undervalued compared to the insurance sector, but fairly valued in comparison to its peers.
- **P/BV vs Industry** suggests that FINS is undervalued compared to its peers and the sector.
- **Dividend Yield:** FINS is not currently offering dividends, while the sector average yield is 6.14%. This may be a negative factor for **income-seeking investors**.

### Earnings Strength: NEUTRAL

1Q25 Results	Premiums Written	Net Income	Net Earnings Ratio	ROE	ROA
(TTM)	JD 24.6 M (+20.7%)	JD 0.65 M (+15.4%)	2.62%	6.89%	3.72%

- **Return on Equity** indicates reasonable profitability for shareholders, but below the insurance sector in Jordan.
- **Return on Assets:** surpasses the industry norm of 2.5%, implying effective utilization of assets to generate income.
- **Net Earnings Ratio** is on the low side and indicates a retention of approximately 2.62% of premiums written as net profit after accounting for claims, operating expenses, reinsurance expenses and other costs.

### Operations Indicators: POSITIVE

1Q25 Ratios	Loss	Expense	Combined	Investment Yield	Risk Retention	Solvency
(MRQ)	89.04%	1.19%	90.23%	4.54%	54.23%	118.43%

- **Loss Ratio:** indicates that the Company is spending 89.0% of its earned premiums on claims. This is within an acceptable range for most insurance companies. A lower loss ratio indicates better underwriting profitability.
- **Expense Ratio:** is relatively low, demonstrating efficient operational management and cost control.
- **Combined Ratio:** A combined ratio below 100% is a strong indicator of profitability, as it shows that the Company is generating underwriting profit without relying on investment income. At 90.23%, this ratio is very strong.
- **Investment Yield** is considered very good for an Islamic insurance company and in the current market environment, indicating that the Company is effectively managing its investment portfolio to generate returns.
- **Risk Retention:** A ratio of 54.23% reflects a conservative risk appetite and high reliance on reinsurance. A higher retention ratio means greater opportunity for profit if underwriting is strong.

Report Date: 04-Jun-25

## First Insurance

ASE: FINS

- **Solvency ratio:** is well above the minimum regulatory requirement, demonstrating strong financial stability and the ability to meet policyholder obligations. This reflects a healthy capital position and provides confidence to stakeholders.

### Solvency Ratio

### Price Movement: **POSITIVE**

Annual Volatility: +/- 18.63%

14-Weeks RSI: 65.6

200-Day MA: 0.73

- **Volatility** suggests that FINS's price has exhibited moderate fluctuations. It's relatively stable compared to high-volatility stocks, indicating less risk for short-term investors
- **14-Weeks RSI:** observed over a 14-week period, indicates that the stock is approaching overbought region, but has not yet triggered a reversal signal, reflecting bullish momentum. Traditionally, an RSI exceeding 70 signifies overbought conditions, while a value below 30 suggests oversold conditions.
- **200-Day Moving Averages:** The stock currently trades slightly above its 200-Day MA which indicates a **Buy** signal.

FINS is exhibiting a strong technical profile, with the stock currently trading above its 200-day moving average. This places the stock firmly in bullish territory, suggesting sustained upward momentum over the medium term.

From a price action perspective, the primary support level lies at JD 0.73, while secondary support can be found at JD 0.69, which has historically served as a floor. The current trading range suggests consolidation around JD 0.80, with key resistance forming at JD 0.83– JD 0.85. A break above this zone, particularly with rising volume, could open the path toward the psychological barrier of JD 0.90 and possibly JD 1.00 in the medium term.

Given the underlying strength of FINS's business—evident in its Q1 2025 results, which showed a 20.7% increase in premiums and 15.4% growth in net income—the technical momentum is supported by sound fundamentals. However, with the RSI nearing 70, a short-term pullback or consolidation is possible before further gains.

Investors seeking exposure could consider initiating positions around current levels or on dips toward JD 0.75, with stops just below JD 0.73 to manage downside risk. Overall, the technical outlook supports a “**moderate buy**” stance, particularly for medium-term investors looking for a Sharia-compliant insurer with improving financials and rising market sentiment.

ASE: FINS

**UFICO Stock Ratings:** UFICO's coverage of stocks uses a quantitative model that evaluates a company's relative valuation, earnings strength, financial stability, and its recent price movement. UFICO's five recommendation ratings include strong buy, buy, hold, sell, strong sell. For all stocks in our coverage universe, ratings are generated each week and reflect the fundamental and price data as of the last trading day of the week.

1	2	3	4	5	<b>Strong Buy</b>	Significantly Satisfactory
1	2	3	4	5	<b>Buy</b>	Satisfactory
1	2	3	4	5	<b>Hold</b>	Average
1	2	3	4	5	<b>Sell</b>	Unsatisfactory
1	2	3	4	5	<b>Strong Sell</b>	Significantly Unsatisfactory

**Relative Valuation:** Relative valuation is a weighted combination of factors that measure a company's current stock price valuation vs industry. These include the company's price-to-earnings vs. industry, and its price-to-book vs. industry. UFICO also measures the rank of a company's dividend yield among dividend payers on the Amman Stock Exchange. A stock may stay undervalued or overvalued for a long period of time. For this reason, it is important to combine dividend yield rank factor with shorter-term predictive factors such as earnings momentum or price momentum to identify more imminent valuation adjustments. In addition, UFICO also measure a company's dividend payments growth over the past 10 years and the degree its dividend payments are covered by earnings.

**Earnings Strength:** Over 20 years of research have shown that the change in the growth of earnings per share is an important factor that drives stock price performance. UFICO measures earnings momentum to get an early indication of changing earnings patterns. Earnings strength is a weighted combination of factors that measure a company's earnings growth performance. These include the company's 5-year average earnings growth rate, its 1-year earnings growth rate vs its 5-year average earnings growth rate, its 1-year earnings growth rate vs. industry, its relative strength of ROE, and its y-o-y profit margin growth rate.

**Financial Stability:** Financial stability is a weighted combination of factors that measure a company's ability to pay its debts in the short and long terms. UFICO looks for a company's capital structure where its total liabilities do not exceed 40% of its equity. For a company's solvency strength, we look for an interest coverage of at least 3x, indicating a company's ability to cover its interest payments through its operating income, and a debt coverage of at least 200%, indicating a company's ability to cover its loans and interest payments through its operating income. For liquidity strength, we look for a company's current ratio of at least 1.25x, indicating current liabilities are sufficiently covered by current assets. Companies in the banking sector are analyzed using assets/equity ratio, loans/deposits ratio, loans/assets ratio, and level of bad loans. For assets/equity ratio, we look for a ratio below 10x, indicating adequate reliance on debt to fund the bank's operations. For loans/deposits ratio, we look for a ratio below 125%, indicating high liquidity and low exposure risk to cover unexpected funding requirements. For loans/asset ratio, we look for a ratio below 110%, indicating high liquidity and low exposure risk to defaults. For the level of bad loans, we look for a ratio below 5.00%, indicating lower provisions are required and, hence, increases bank profitability.

**Recent Price Movement:** Historical price action of a company's stock is an especially helpful measure used to identify intermediate and short term performance potential. Long term historical performance is a good predictor of future price performance, but much more importantly, large price movements over the intermediate and short term tend to reverse themselves. UFICO's price momentum measure integrates historical long, intermediate and short term price changes, creating ratings that are highest for stocks with strong twelve-month price performance that have had a price consolidation in the past quarter and month. Price movement is an evaluation based on a company's relative share price strength in the past 1-quarter, 14-day and 1-year period. In UFICO's analysis, positive price strength in the past 200-day period is a favorable indication of near-term price gain. Conversely, positive price changes in the past quarter or 14-day period can indicate a short-term overbought condition resulting in negative near-term price change.
